PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/688,066	Applicant(s) CLARK, GREGORY SCOTT	
	Examiner George C. Neurauter, Jr.	Art Unit 2143	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 05 October 2007.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-22 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-22 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Art Unit: 2143

DETAILED ACTION

Claims 1-22 are currently presented and have been examined.

Continued Examination under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 5 October 2007 has been entered.

Response to Arguments

Applicant's arguments with respect to claims 1-22 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-22 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description

Art Unit: 2143

requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

An objective standard for determining compliance with the written description requirement is, "does the description clearly allow persons of ordinary skill in the art to recognize that he or she invented what is claimed." *In re Gosteli*, 872 F.2d 1008, 1012, 10 USPQ2d 1614, 1618 (Fed. Cir. 1989). Under *Vas-Cath, Inc. v. Mahurkar*, 935 F.2d 1555, 1563-64, 19 USPQ2d 1111, 1117 (Fed. Cir. 1991), to satisfy the written description requirement, an applicant must convey with reasonable clarity to those skilled in the art that, as of the filing date sought, he or she was in possession of the invention, and that the invention, in that context, is whatever is now claimed. See also MPEP 2163.02.

The claims recite "sending the applet to an application at the file transfer gateway". This limitation is not described in the specification to allow one of ordinary skill to recognize that the Applicant invented a method of transferring an applet from a browser to a file transfer gateway. The "file transfer gateway" nor the browser as described in the specification are

Art Unit: 2143

not described in sufficient detail to adequately explain how the gateway is able to receive an applet or how the browser is able to send the applet to the gateway. Therefore, the claims fail to comply with the written description requirement for this limitation.

Claims 1-22 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

The claims recite "sending the applet to an application at the file transfer gateway" which is not described within the specification to enable one skilled in the art to be able to make and/or use a method or system to be able to accomplish this limitation. Therefore, the claims fail to comply with the enablement requirement.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-22 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point

Art Unit: 2143

out and distinctly claim the subject matter which applicant regards as the invention.

The claims recite "wherein the file is pushed from the server through the firewall to the file transfer gateway...by a server receiving a registration..." It is unclear, in view of the specification, which "server" is being referred to.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Art Unit: 2143

Claims 1-2, 4-12, and 14-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent Application Publication 2003/0033517 A1 to Rutherglen et al in view of Applicant's admitted prior art ("AAPA").

Regarding claim 1, Rutherglen disclosed a method of transferring a file to or from a server (referred to throughout the reference as a "database server") past a firewall, comprising the steps of:

accessing a web site ("application server"; paragraph 0032) behind the firewall, the web site having a web page including an applet, and the web site associated with the server; receiving the web page and the applet from the web site; (paragraph 0031)

sending the applet to an application at a file transfer gateway ("database proxy object"); and transferring the file between the file transfer gateway and the server through the firewall, wherein the file is pushed from the server through the firewall to the file transfer gateway. (paragraphs 0020, 0030, 0038, and 0040)

Rutherglen does not expressly disclose wherein the pushing of the file is accomplished by a target by a target registering with the server behind the firewall, polling the server for files to be downloaded, and downloading the file from the server through the firewall over a virtual channel and by a server

Art Unit: 2143

receiving a registration at the server behind the firewall, receiving polling of the server for files to be downloaded, and downloading the file from the server through the firewall over a virtual channel, however, the Applicant admitted that "The invention also is applicable for a "push" operation in which a file download is pushed from a server to a target. From the target's perspective, one embodiment of this aspect of the invention is a method that includes the steps of registering with the server behind the firewall, polling the server for files to be downloaded, and downloading the file from the server through the firewall over a virtual channel. From the server's perspective, another embodiment is a method that includes receiving a registration at the server behind the firewall, receiving polling of the server for files to be downloaded, and downloading the file from the server through the firewall over a virtual channel." (page 6, lines 14-21 of the specification).

The Applicant also admitted that "FIG. 9 shows details of a server-initiated download, known as a "push" operation, utilizing a file transfer technique according to one embodiment of the invention." (page 29, lines 16-17 of the specification)

Therefore, since the Applicant has admitted that the use of a "push" operation was known, it would have been obvious to one of ordinary skill in the art at the time the invention was made

Art Unit: 2143

to use the known method of pushing a file through a firewall from a computer node such as a server to a computer node such as a target like a file transfer gateway in order to transfer a file through a firewall in the manner has disclosed in Rutherglen. It would have been obvious since such a "push" operation was known in the prior art as demonstrated by the "Gnutella Protocol Specification" reference cited in this Office Action (see page 5, specifically the section "Push (0x40)" and page 8, specifically the section "Firewalled Servents", particularly regarding "pushing" a file). Therefore, it would have been obvious to achieve the claimed invention.

Regarding claim 2, Rutherglen and AAPA disclosed a method as in claim 1.

Rutherglen discloses herein the web site is at a collaboration manager separate from the server. (paragraphs 0031, specifically "In the example shown, the...system may include an application server 60 and a database server 62." (see also Figure 1) and paragraph 0105, specifically "In another scenario, the database server and the application server are on separate physical machines...")

Regarding claim 4, Rutherglen and AAPA disclosed a method as in claim 1.

Art Unit: 2143

Rutherglen discloses wherein accessing the web site and receiving the web page and the applet are performed using a web browser. (paragraph 0030)

Regarding claim 5, Rutherglen and AAPA disclosed a method as in claim 4.

Rutherglen discloses wherein the web browser and the file transfer gateway are implemented on a client. (paragraphs 0030 and 0038)

Regarding claim 6, Rutherglen and AAPA disclosed a method as in claim 1.

Rutherglen discloses wherein the application at the file transfer gateway is a file transfer service implemented on a client or edgebox. (paragraph 0038)

Regarding claim 7, Rutherglen and AAPA disclosed a method as in claim 6.

Rutherglen discloses wherein transferring the file between the file transfer gateway and the server is performed over a virtual channel between the file transfer service at the file transfer gateway and a file transfer adapter at the server. (paragraphs 0038 and 0040)

Regarding claim 8, Rutherglen and AAPA disclosed a method as in claim 1.

Art Unit: 2143

Rutherglen discloses wherein the file is transferred in chunks. (paragraphs 0036 and 0037)

Regarding claim 9, Rutherglen and AAPA disclosed a method as in claim 8.

Rutherglen discloses wherein the chunks are transferred using a basic hypertext transport mechanism. (paragraphs 0036 and 0037)

Regarding claim 10, Rutherglen and AAPA disclosed a method as in claim 1.

Rutherglen discloses further comprising the step of encrypting, decrypting, or performing some other operation on the file before or after transferring the file. (paragraphs 0020, 0030, 0038, and 0040; see also Figures 3A and 3B)

Regarding claim 11, Rutherglen disclosed a method of transferring a file to or from a server past a firewall, comprising the steps of:

authenticating access by a requestor to a web site behind the firewall; the web site having a web page including an applet, and the web site associated with the server; sending the web page and the applet to the requestor; receiving a request from the requestor to transfer the file to or from the requestor; transferring the file between the file transfer gateway and the server through the firewall, wherein the file is

Art Unit: 2143

pushed from the server through the firewall to the file transfer gateway. (paragraphs 0008, 0020, 0030, 0031, 0038, and 0040)

Rutherglen does not expressly disclose wherein the pushing of the file is accomplished by a target by a target registering with the server behind the firewall, polling the server for files to be downloaded, and downloading the file from the server through the firewall over a virtual channel and by a server receiving a registration at the server behind the firewall, receiving polling of the server for files to be downloaded, and downloading the file from the server through the firewall over a virtual channel, however, the Applicant admitted that "The invention also is applicable for a "push" operation in which a file download is pushed from a server to a target. From the target's perspective, one embodiment of this aspect of the invention is a method that includes the steps of registering with the server behind the firewall, polling the server for files to be downloaded, and downloading the file from the server through the firewall over a virtual channel. From the server's perspective, another embodiment is a method that includes receiving a registration at the server behind the firewall, receiving polling of the server for files to be downloaded, and downloading the file from the server through the firewall over a virtual channel." (page 6, lines 14-21 of the specification).

Art Unit: 2143

The Applicant also admitted that "FIG. 9 shows details of a server-initiated download, known as a "push" operation, utilizing a file transfer technique according to one embodiment of the invention." (page 29, lines 16-17 of the specification)

Claim 11 is rejected since the motivations regarding the obviousness of claim 1 also apply to claim 11.

Regarding claim 12, Rutherglen and AAPA disclosed a method as in claim 11.

Rutherglen discloses wherein the requestor is a browser or edgebox. (paragraph 0030)

Claims 14-18 are also rejected since these claims recite substantially the same limitations as recited in claims 2 and 7-10 respectively.

Regarding claim 19, Rutherglen disclosed a method of downloading a file from a server past a firewall, comprising the steps of:

registering with the server behind the firewall; polling the server for files to be downloaded; and downloading the file from the server through the firewall over a virtual channel; wherein the file is transferred in chunks using a basic hypertext transport mechanism. (paragraphs 0036-0038, 0040, and 0082)

Art Unit: 2143

Rutherglen does not expressly disclose wherein the pushing of the file is accomplished by a target by a target registering with the server behind the firewall, polling the server for files to be downloaded, and downloading the file from the server through the firewall over a virtual channel and by a server receiving a registration at the server behind the firewall, receiving polling of the server for files to be downloaded, and downloading the file from the server through the firewall over a virtual channel, however, the Applicant admitted that "The invention also is applicable for a "push" operation in which a file download is pushed from a server to a target. From the target's perspective, one embodiment of this aspect of the invention is a method that includes the steps of registering with the server behind the firewall, polling the server for files to be downloaded, and downloading the file from the server through the firewall over a virtual channel. From the server's perspective, another embodiment is a method that includes receiving a registration at the server behind the firewall, receiving polling of the server for files to be downloaded, and downloading the file from the server through the firewall over a virtual channel." (page 6, lines 14-21 of the specification).

The Applicant also admitted that "FIG. 9 shows details of a server-initiated download, known as a "push" operation,

Art Unit: 2143

utilizing a file transfer technique according to one embodiment of the invention." (page 29, lines 16-17 of the specification)

Claim 19 is rejected since the motivations regarding the obviousness of claim 1 also apply to claim 19.

Claim 20 is also rejected since claim 20 recites substantially the same limitations as recited in claim 10.

Claims 21 and 22 are also rejected since claims 21 and 22 recite substantially the same limitations as recited in claims 19 and 10 respectively.

Claims 3 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rutherglen and AAPA in view of "Java Applet Signing Guide" to Wilson.

Regarding claim 3, Rutherglen and AAPA disclosed a method as in claim 1.

Rutherglen disclosed wherein a user accessing the web site is authorized prior to retrieval of the applet. (paragraph 0008, 0030, and 0036)

Rutherglen and AAPA did not expressly disclose wherein the applet is signed, however, Wilson does disclose this limitation (page 5, first paragraph)

It would have been obvious to one of ordinary skill in the art at the time the invention was made to combine the teachings of these references since Wilson discloses that signing applets

Art Unit: 2143

enables the user to determine whether the source of the applet can be trusted (page 5, first paragraph). In view of these specific advantages and that the references are directed to communicating information between a client and a server, one of ordinary skill would have been motivated to combine these references and would have considered them to be analogous to one another based on their related fields of endeavor, which would lead one of ordinary skill to reasonably expect a successful combination of the teachings.

Claim 13 is also rejected since claim 13 recites substantially the same limitations as recited in claim 3.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to George C. Neurauter, Jr. whose telephone number is 571-272-3918. The examiner can normally be reached on Monday-Friday 9am-5:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nathan Flynn, can be reached on 571-272-1915. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
